

NEVER

leave children in a car for
any amount of time,
for any reason.

Not with the window cracked.
Not because they're sleeping.

Not even for 1 Minute.

Inside your car,
temperatures rise quickly.

If the Exterior Temperature is 80° F, then Inside Temperature is:

On a hot day...
A car parked in direct sunlight
could reach 118° F in as little as 20 minutes.
Even with the window cracked!

A child's core temperature rises
5x faster than an adults.

Inside a hot car, their core
temperature can quickly rise
to **104° F** or more, causing:

- organ failure
- brain damage
- death

29 CHILDREN DIE EVERY YEAR
after being left in a hot car.
